

Detector: full connected current

$$J_D(-a\mathbf{k})$$

Independent preparation and age window

Source: full connected current

$$J_S(+a\mathbf{k})$$

Independent preparation and age window

The same whole289 Green; source-generated IR radius

$$0 < a|\mathbf{k}| < r_{D,S}, \quad \mathbf{k} = 2\pi\xi$$

$$\|m_a(\mathbf{k})\| \leq B_{D,S}/|\mathbf{k}|^2$$

An actual Fourier integral on Schwartz input

$$\mathcal{O}_a(x) = \int e^{2\pi i \xi \cdot x} \phi(\xi) m_a(2\pi\xi) d^3\xi$$

The same transfer returns to Newton space

$$\mathcal{O}_a(x) \longrightarrow C_0 \int \frac{f(x-y)}{4\pi|y|} d^3y, \quad f = \mathcal{F}^{-1} \phi$$
