

A One word, two finite windows

B Check the source of this frame

the activated runtime of the new last tick

the target tick of the original b -budget history

read back field by field to one runtime.

C If only the common reading is kept, what is lost?

at $x \mapsto 0$: the words 0 and x both read 0.

at $x \mapsto 1$: the former reads 0, the latter 1.

the shared reading of Example 4.1 did not designate a common witness; keeping w gives the extension along the same source above.
